Introduction to FEMM
“Reproductive health is a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity, in all matters relating to the reproductive system and its functions and processes. Reproductive health therefore implies that people are able to have a satisfying and safe sex life and that they have the capability to reproduce and the freedom to decide if, when and how often to do so. Implicit in this last condition are the right of men and women to be informed and to have access to safe, effective, affordable and acceptable methods of family planning of their choice, as well as other methods of birth control which are not against the law, and the right of access to appropriate health-care services that will enable women to go safely through pregnancy and childbirth and provide couples with the best chance of having a healthy infant.”
Reproductive health

“That definition (found in paragraph 7.2 of the Program of Action) does not include any reference to abortion at all. On the contrary, rather than imposing on any State an obligation to legalize or de-penalize abortion, the ICPD Program of Action explicitly recognizes the sovereignty of states to legislate on that matter”.

– notes on Article 7, SJA
Unmet need

NOTE: "Sources limited" is referred to as "lack of access/difficult to get" in the original study (Bongaarts and Bruce, 1995).
Informed Consent is an accepted principle for achieving human rights under international law and codified as a critical guideline with the World Health Organization.

“...the understanding of the information being provided.”

WHO 2011
Policy cycle framework

Implementation → Policy → Funding
Policy cycle framework

International business model

Implementation (IPPF)

Policy (reproductive health)

Funding (USAID)
Dick & Jane
international business model

1. Gov’t commits to int’l policy
2. Gov’t receives funds
3. Gov’t gives money to organization (IPPF) to implement programs

- CONTRACEPTION
- ABORTION
- SEX ED
Organ function is influenced by hormones

The brain signals the ovaries to produce hormones.

The ovaries produce estrogen and progesterone.

Estrogen and progesterone influence the uterus and cervix.
Hormones: estrogen & progesterone
